unlocking your tomorrow

Unlocking your data

Ingenta Aperture gives trusted parties access to the information locked inside your systems. The web-based application provides intuitive access wherever you are, giving you the information you need on demand.

## Unlocking your data

Aperture allows organisations to create a view into their data which can be accessed on demand, regardless of where the information is stored. Set access rights to make sure sensitive information is shared on a 'need to know' basis. This allows you to share business insights, securely, on your own terms.

### Typical examples of use:

- Authors accessing royalty statements
- Detailed product, pricing, bundling and order information; on demand for bookstores
- Metadata access for project contributors
- On-the-go access for reps.

## Key benefits

Give third parties a self-service mechanism, allowing them to access information previously locked within internal infrastructure.

Customers can access the information they need, on demand, reducing the number of routine customer service queries and costs.

Aperture is database neutral, meaning the application can work with any system through a web API.
